Meeting Modern Work and Security Needs with Tailored, Proactive Solutions

Defining the Challenge

Cybersecurity should be at the forefront of every business's mind, especially due to the rise of remote and hybrid workplaces. Threats have become more prevalent and more advanced, making cybersecurity even more important.

MCM Technology Solutions helps companies in a variety of verticals analyze their needs and improve efficiencies by using the latest technology and top-tier services. Recently, they partnered with TD SYNNEX to help a business transition from real estate to capital management by enhancing their security and compliance IT environment.

Exploring the Solution

Upgrading their client from Microsoft 365 Business Standard licenses to Microsoft 365 Business Premium licenses, MCM Technology Solutions took advantage of the cutting-edge security and compliance benefits. Microsoft 365 Business Premium includes protections against threats hidden in email attachments and links, cutting-edge defenses against zero-day threats and ransomware, as well as other advanced malware attempts.

After a consultative session with their TD SYNNEX Cloud Specialist and Solution Engineer, MCM Technology Solutions was also able to design a tailored security solution that made it easy to review and audit their customers' security posture at any time.

Reflecting on the Results

MCM Technology Solutions effectively deployed TD SYNNEX's Modern Workplace with Secure Score Click to Run™ solution for their client. This solution enabled them to improve their client's security posture and performance by identifying security threats within their Microsoft 365 environment and deploying security policies to mitigate potential risk.

Building a more secure environment with data loss prevention, Intune and other Microsoft tools, along with exclusive training and enablement from TD SYNNEX, MCM Technology Solutions was able to position their client to stay ahead of the latest security threats with a proactive approach.
