

## Join Us for a Hands-On Learning Experience

All attendees who complete a Fast Track Training will receive a \$25 Uber Eats voucher following the event, as well as automatically be entered into a raffle for the chance to win a Network Security Expert Certification voucher for level four and above—a \$400 value—as well as an additional prize!

### Fortinet Fast Track Training Fortinet's Retail Solution

**May 16, 2024 | Noon-4 p.m. EDT | Virtual**

Retailers present cyber criminals with an attractive target. Customer payment data is transmitted across the network and stored on-premises, as well as in public and private clouds. At the same time, the arrival of omnichannel customer experiences creates challenges in branch retail locations where customers demand high performance and secure connections.

Fortinet provides retailers with transparent visibility and real-time security workflows and threat-intelligence sharing. This level of integration also unlocks automation that enables lean network and security teams to work more efficiently and faster while also allowing them to reduce risk – all at a low total cost of ownership (TCO).

#### Participants who attend this workshop will learn how to:

- Configure and manage the Fortinet Security Fabric
  - Configure SD-WAN between multiple sites
- Prevent business email compromise (BEC) attacks

### Fortinet's Identity and Access Management

**June 13, 2024 | Noon-4 p.m. EDT | Virtual**

Many of today's most damaging security breaches have been due to compromised user accounts and passwords, exacerbated by groups of users being provided with inappropriate levels of access. Securely and effectively managing identity authentication and authorization policies for all systems and applications is crucial to protect against security breaches. FortiAuthenticator provides services that are key in creating effective security policies and strengthening security by ensuring only the right person, at the right time, can access your sensitive networks and data.

Participants who attend this workshop will learn how to:

- Configure FortiAuthenticator integration with existing LDAP
- Configure FortiAuthenticator Fortinet Single Sign-On using Windows Event Polling and Windows Mobility Agent
- Complete certificate management for an enterprise including CA certificate creation
- Generate a FortiGate HTTPS certificate request and sign it using FortiAuthenticator SCEP
- Finally, you will configure webserver administrator access with two-factor authentication using RADIUS
